1 Article abstracts with full text online: Component evolution and versioning state of the ▬
◈ art
Alexander Stuckenholz
January 2005 **ACM SIGSOFT Software Engineering Notes**, Volume 30 Issue 1
Publisher: ACM Press
Full text available: 📄 pdf(213.99 KB)   Additional Information: full citation, abstract, references, index terms

> Emerging component-based software development architectures promise better re-use of software components, greater flexibility, scalability and higher quality of services. But like any other piece of software too, software components are hardly perfect, when being created. Problems and bugs have to be fixed and new features need to be added.This paper analyzes the problem of component evolution and the incompatibilities which result during component upgrades. We present the state of the art in co ...

2 Safely executing untrusted code: Upgrading transport protocols using untrusted ▬
◈ mobile code
Parveen Patel, Andrew Whitaker, David Wetherall, Jay Lepreau, Tim Stack
October 2003 **Proceedings of the nineteenth ACM symposium on Operating systems principles**
Publisher: ACM Press
Full text available: 📄 pdf(248.86 KB)   Additional Information: full citation, abstract, references, citings, index terms

> In this paper, we present STP, a system in which communicating end hosts use untrusted mobile code to remotely upgrade each other with the transport protocols that they use to communicate. New transport protocols are written in a type-safe version of C, distributed out-of-band, and run in-kernel. Communicating peers select a transport protocol to use as part of a TCP-like connection setup handshake that is backwards-compatible with TCP and incurs minimum connection setup latency. New transports ...

3 A formal framework for component deployment ▬
◈ Yu David Liu, Scott F. Smith
October 2006 **ACM SIGPLAN Notices , Proceedings of the 21st annual ACM SIGPLAN conference on Object-oriented programming languages, systems, and**

applications OOPSLA '06, Volume 41 Issue 10
Publisher: ACM Press
Full text available: 🔒 pdf(592.54 KB)   Additional Information: full citation, abstract, references, index terms

Software deployment is a complex process, and industrial-strength frameworks such
as .NET, Java, and CORBA all provide explicit support for component deployment.
However, these frameworks are not built around fundamental principles as much as they
are engineering efforts closely tied to particulars of the respective systems. Here we aim
to elucidate the fundamental principles of software deployment, in a platform-independent
manner. Issues that need to be addressed include deployment unit design ...

4 Predicting problems caused by component upgrades
   Stephen McCamant, Michael D. Ernst
   September 2003 **ACM SIGSOFT Software Engineering Notes , Proceedings of the 9th
   European software engineering conference held jointly with 11th
   ACM SIGSOFT international symposium on Foundations of software
   engineering ESEC/FSE-11**, Volume 28 Issue 5
   Publisher: ACM Press

   Full text available: 🔒 pdf(142.32 KB)   Additional Information: full citation, abstract, references, citings, index
                                                                              terms

   We present a new, automatic technique to assess whether replacing a component of a
   software system by a purportedly compatible component may change the behavior of the
   system. The technique operates before integrating the new component into the system or
   running system tests, permitting quicker and cheaper identification of problems. It takes
   into account the system's use of the component, because a particular component upgrade
   may be desirable in one context but undesirable in another. No forma ...

5 Interoperability with C in Fortran 2003
   Aleksander Donev
   April 2006 **ACM SIGPLAN Fortran Forum**, Volume 25 Issue 1
   Publisher: ACM Press
   Full text available: 🔒 pdf(76.96 KB)   Additional Information: full citation, abstract, index terms

   One of the major new features in the Fortran 2003 is features for interoperability with C ©
   Interop). The intrinsic module ISO_C_BINDING provides:• constants, mostly type
   parameters, C_NULL_CHAR, C_NULL_PTR, and others,• types, and in particular, TYPE
   (C_PTR) and TYPE(C_FUNPTR),• procedures, such as C_LOC, C_FUNLOC, C_F_POINTER,
   C_F_PROCPOINTER and C_ASSOCIATED.A Fortran interface can be specified for a C
   function with external linkage and used to invoke such a function. The i ...

6 An overview of portable GUI software
   Wade Guthrie
   January 1995 **ACM SIGCHI Bulletin**, Volume 27 Issue 1
   Publisher: ACM Press
   Full text available: 🔒 pdf(1.90 MB)   · Additional Information: full citation, abstract, index terms

   This article attempts to bring together as much information as possible concerning
   platform-independent Graphical User Interface (PIGUI) development kits. It is based on a
   FAQ list (answers to Frequently Answered Questions) maintained and periodically updated
   as a service to the net by the author.What is presented here is a number of tables

summarizing available PIGUI's, followed by descriptions of the individual products, with reviews and users' comments where possible.

7 Type-based hot swapping of running modules (extended abstract)

Dominic Duggan

October 2001 **ACM SIGPLAN Notices , Proceedings of the sixth ACM SIGPLAN international conference on Functional programming ICFP '0 1**, Volume 36 Issue 10

Publisher: ACM Press

Full text available: 📄 pdf(150.34 KB)   Additional Information: full citation, abstract, references, citings, index terms

While dynamic linking has become an integral part of the run-time execution of modem programming languages, there is increasing recognition of the need for support for hot swapping of running modules, particularly in long-lived server applications. The interesting challenge for such a facility is to allow the new module to change the types exported by the original module, while preserving type safety. This paper describes a type-based approach to hot swapping running modules. The approach is bas ...

8 Loader standardization for overlay programs

Bernadine C. Lanzano

October 1969 **Communications of the ACM**, Volume 12 Issue 10

Publisher: ACM Press

Full text available: 📄 pdf(1.28 MB)   Additional Information: full citation, abstract, references, citings, index terms

The overlay capability is described for four of the third generation computer systems: CDC-6000, GE-635, IBM-360, and UNIVAC-1108. A critique of the first three sytems is based on actual experience with a large overlaid trajectory simulation program; a short history and description of this program is presented. A standardization of minimum capabilities for loaders is recommended so that programs which must operate under more than one computer system may be easily converted and maintained. A ...

Keywords: CDC-6000, GE-635, IBM-360, UNIVAC-1108, linkage, linkage editor, loader, memory occupation, memory utilization, overlay, partition, region, segmentation, standardization, tree structure

9 Profile-based optimizations: Reality-based optimization

Scott McFarling

March 2003 **Proceedings of the international symposium on Code generation and optimization: feedback-directed and runtime optimization CGO '03**

Publisher: IEEE Computer Society

Full text available: 📄 pdf(1.09 MB)   Additional Information: full citation, abstract, references, citings, index terms

Profile-based optimization has been studied extensively. Numerous papers and real systems have shown substantial improvements. However, most of these papers have been limited to either branch prediction or instruction cache performance. Also, most of these papers have looked at small applications with a limited number of testing and training scenarios.In this paper, we look at real use of large real-world desktop applications. We also assume memory consumption and disk performance are the primar ...

10 Specialized computer labs: care and feeding

Trevor Murphy, Sharron Macklin

November 2006 **Proceedings of the 34th annual ACM SIGUCCS conference on User services SIGUCCS '06**

Publisher: ACM Press

Full text available: pdf(185.17 KB)   Additional Information: full citation, abstract, references, index terms

This paper is a brief overview of some of the challenges and successes related to the support of a Geographic Information Systems (GIS) Windows lab and a music technology Mac OS lab at Williams College. Specialized computer labs can present some surprising issues that set them apart from general academic computer labs. The GIS lab and music technology labs at Williams have provided many examples of such challenges, including:

- Finding academic pricing for non-academic software.

- C ...

Full text available: htm(33.44 KB)   Additional Information: full citation, references, index terms

12 Global abstraction-safe marshalling with hash types

James J. Leifer, Gilles Peskine, Peter Sewell, Keith Wansbrough

August 2003 **ACM SIGPLAN Notices , Proceedings of the eighth ACM SIGPLAN international conference on Functional programming ICFP '03**, Volume 38 Issue 9

Publisher: ACM Press

Full text available: pdf(226.25 KB)   Additional Information: full citation, abstract, references, citings, index terms

Type abstraction is a key feature of ML-like languages for writing large programs. Marshalling is necessary for writing distributed programs, exchanging values via network byte-streams or persistent stores. In this paper we combine the two, developing compile-time and run-time semantics for marshalling, that guarantee abstraction-safety between separately-built programs. We obtain a namespace for abstract types that is global, i.e. meaningful between programs, by hashing module declarations. We ...

Keywords: ML, abstract types, distributed programming, hashing, lambda calculus, marshalling, modules, programming languages, serialisation, singleton kinds, type theory

13 Client-server computing

Alok Sinha

July 1992 **Communications of the ACM**, Volume 35 Issue 7

16 Computer security: Neutralizing windows-based malicious mobile code
James A. Whittaker, Andres De Vivanco
March 2002 **Proceedings of the 2002 ACM symposium on Applied computing**
Publisher: ACM Press

Full text available: pdf(840.36 KB)   Additional Information: full citation, abstract, references, citings, index terms

Mobile code---executable programs that get copied from computer-to-computer via e-mail,
web browsers, etc.---is a popular way to stage malicious attacks against users. The
Windows operating system is often the target of such attacks, in part because of its
ubiquity and in part because of the vast functionality it provides. Some of this
functionality, like executable e-mail attachments and scripting, provides opportunity for
mobile code to cause significant damage to a host system. One obv ...

virus, windows, worm, wrapper

17 Digital rights management for content distribution
Qiong Liu, Reihaneh Safavi-Naini, Nicholas Paul Sheppard
January 2003 **Proceedings of the Australasian information security workshop
conference on ACSW frontiers 2003 - Volume 21 ACSW Frontiers '03**
Publisher: Australian Computer Society, Inc.

Full text available: pdf(224.63 KB)   Additional Information: full citation, abstract, references, citings, index terms

Transferring the traditional business model for selling digital goods linked to physical
media to the online world leads to the need for a system to protect digital intellectual
property. Digital Rights Management(DRM) is a system to protect high-value digital assets
and control the distribution and usage of those digital assets. This paper presents a review
of the current state of DRM, focusing on security technologies, underlying legal
implications and main obstacles to DRM deployment with the ...

18
Binary software components in the undergraduate computer science curriculum

Allen Parrish, Brandon Dixon, David Cordes
February 2001 **ACM SIGCSE Bulletin , Proceedings of the thirty-second SIGCSE technical symposium on Computer Science Education SIGCSE '01,**
Volume 33 Issue 1
Publisher: ACM Press
Full text available: pdf(442.10 KB)   Additional Information: full citation, abstract, references, index terms

At one time, commercial software applications were released as single binary executable files. Discussions of the notion of a "software component" were almost always limited to the context of source code. However, with the proliferation of numerous new technologies, applications are now more typically released as collections of cooperating binary components. While there is significant industrial emphasis on binary component technologies, computer science curricula have not yet standardized upon ...

19 Compilation: Reflective program generation with patterns

Manuel Fähndrich, Michael Carbin, James R. Larus
October 2006 **Proceedings of the 5th international conference on Generative programming and component engineering GPCE '06**
Publisher: ACM Press
Full text available: pdf(200.25 KB)   Additional Information: full citation, abstract, references, index terms

Runtime reflection facilities, as present in Java and .NET, are powerful mechanisms for inspecting existing code and metadata, as well as generating new code and metadata on the fly. Such power does come at a high price though. The runtime reflection support in Java and .NET imposes a cost on all programs, whether they use reflection or not, simply by the necessity of keeping all metadata around and the inability to optimize code because of future possible code changes. A second---often overlook ...

Keywords: generative programming, patterns, reflection, templates

20 The SANE Scanner Interface

David Mosberger
March 1998 **Linux Journal**
Publisher: Specialized Systems Consultants, Inc.
Full text available: html(21.23 KB)   Additional Information: full citation, abstract, references, index terms

SANE makes it easy to support a wide variety of devices and of applications with a minimum amount of programming effort
